

**Square Foot Vegetable Garden Planner**

 <p align="center">9 Spinach</p>	 <p align="center">9 Green Beans</p>	 <p align="center">1 Cauliflower</p>	 <p align="center">1 Broccoli</p>
 <p align="center">1 Cherry Tomato</p>	 <p align="center">9 Green Beans</p>	 <p align="center">16 Beets</p>	 <p align="center">1 Cabbage</p>
 <p align="center">16 Carrots</p>	 <p align="center">4 Lettuce</p>	 <p align="center">4 Lettuce</p>	 <p align="center">1 Pepper</p>
 <p align="center">32 Radish</p>	 <p align="center">16 Carrots</p>	 <p align="center">32 Green Onions</p>	 <p align="center">16 Onions</p>

In the northern hemisphere, plant the layout as is, with the taller plants and the north most part of the bed and the shorter plants at the south end of the bed. In the southern hemisphere, reverse this layout, with the tallest plants at the south end of the bed and the shorter ones at the northern end.

This makes sure all the plants get enough light and are not shaded out by taller plants.
